

Directions:

- Remove the cards that show 10 and set them aside.
- Each partner:
  - Start with 7 cards. Choose at least 5 of them to create a division expression with a 2-digit divisor. Write a division expression and find the quotient and remainder.
  - Write a multiplication expression to represent the quotient and remainder.
  - Check your partner’s work to make sure you agree.
  - Your score for the round is the remainder of your expression.  
(Example: 1, 119 ÷ 25 is  $(25 \times 44) + 19$  . So, the score is 19.
- Take new cards so that you always have 7 cards at the beginning of a new round.
- The partner with fewer points after 6 rounds wins the game.
