

Interpret Measurement Data on Line Plots

Let's make sense of line plots with lengths in half inches and quarter inches.

1. Write 3 statements about the measurements represented in the line plot.

2.	What questions could be answered more easily with the line plot than the list? Write at least 2 questions.

All about Twigs

- 1. How many twig lengths are represented in the line plot?
- 2. How many of the twigs are $6\frac{1}{2}$ inches long?
- 3. How many of the twigs are less than 6 inches long?
- 4. How many of the twigs are more than 6 inches long?
- 5. What is the length of the shortest twig?
- 6. What is the length of the longest twig?

- 7. What is the most common twig length?
- 8. Add an "x" to the line plot that would represent a twig with a length between 3 and 4 inches.

What is the length of the twig you added to the line plot?
