Unit 6, Lesson 10

Using Data Displays to Find Associations

Let's use data displays to find associations.

10.1 Sports and Musical Instruments

For a survey, students in a class answered these questions:

- Do you play a sport?
- Do you play a musical instrument?

1. Here is a two-way table that gives some results from the survey. Complete the table, assuming that all students answered both questions.

	plays instrument	does not play instrument	total
plays sport	5		16
does not play sport			
total		15	25

2. To the nearest percentage point, what percentage of students who play a sport *don't* play a musical instrument?

3. To the nearest percentage point, what percentage of students who *don't* play a sport also *don't* play a musical instrument?

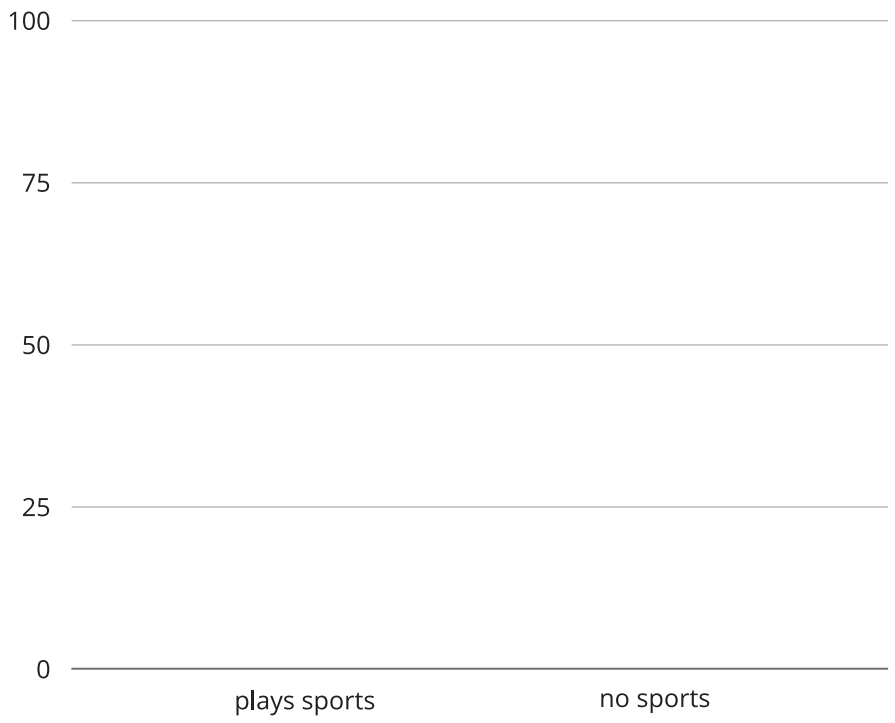
10.2 Sports and Music Association

Your teacher will give you a two-way table with information about the number of people in your class who play sports or musical instruments.

1. Complete this table to make a two-way table for the data from earlier. The table will show relative frequencies *by row*.

	plays instruments	does not play instruments	row total
plays sports			100%
does not play sports			100%

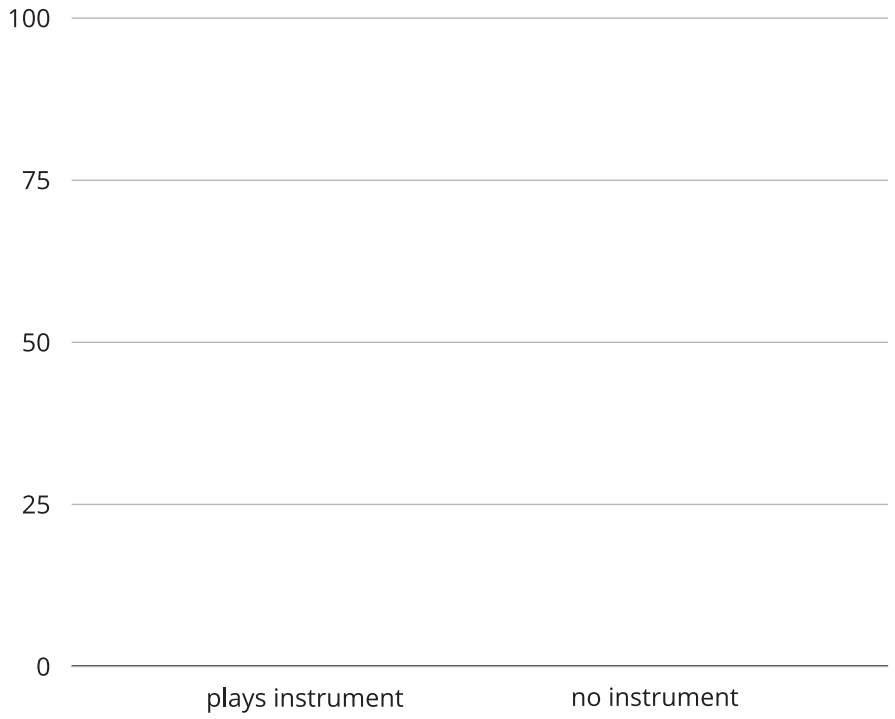
2. Make a segmented bar graph for the table. Use one bar of the graph for each row of the table.



3. Complete the table to make a two-way table for the data from earlier. The table will show relative frequencies *by column*.

	plays instruments	does not play instruments
plays sports		
does not play sports		
column total	100%	100%

4. Using the values in the table, make a segmented bar graph. Use one bar of the graph for each column of the table.



5. Based on the two-way tables and segmented bar graphs, do you think there is an association between playing a sport and playing a musical instrument? Explain how you know.

10.3 Colored Erasers

An eraser factory has five machines. One machine makes the eraser shapes. Then each shape goes through the red machine, blue machine, yellow machine, or green machine to have a side colored.

The manager notices that an uncolored side of some erasers is flawed at the end of the process and wants to know which machine needs to be fixed: the shape machine or some of the color machines. The manager collected data on the number of flawed and unflawed erasers of each color.

1. Work with a partner. Each of you should make 1 segmented bar graph for the data in the table.

   One segmented bar graph should have a bar for each *row* of the table.

   The other segmented bar graph should have one bar for each *column* of the table.

	unflawed	flawed	total
red	285	15	300
blue	223	17	240
yellow	120	80	200
green	195	65	260
total	823	177	1000

2. Are the flawed erasers associated with certain colors? If so, which colors? Explain your reasoning.

Are you ready for more?

Based on the federal budgets for 2009, the table shows where some of the federal money was expected to go. The values are in billions of U.S. dollars.

	United States	Japan	United Kingdom
defense	718.4	42.8	49.2
education	44.9	47.5	113.9

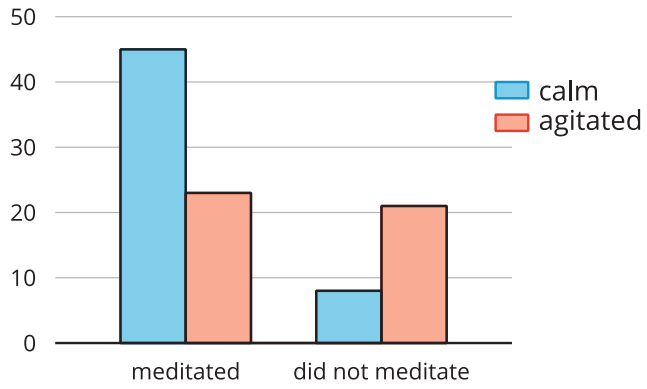
1. Why would a segmented bar graph be more useful than the table of data to see any associations between the country and where the money is spent?

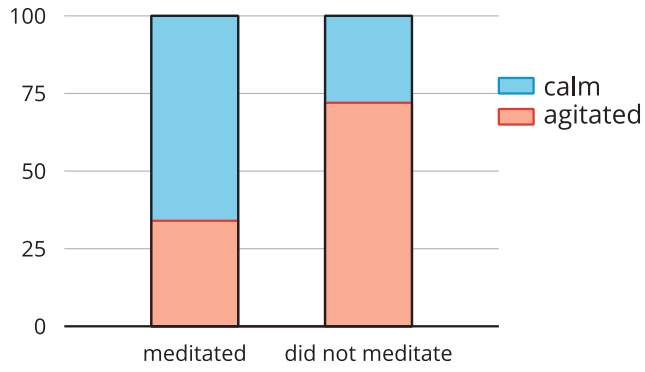
2. Create a segmented bar graph that represents the data from the table.

3. Is there an association between the country's budget and their spending in these areas? Explain your reasoning.

Lesson 10 Summary

In an earlier lesson, we looked at data on meditation and state of mind in athletes.





Is there an association between meditation and state of mind?

The bar graph shows that more athletes were calm than agitated among the group that meditated, and more athletes were agitated than calm among the group that did not.

We can see the proportions of calm meditators and calm non-meditators from the segmented bar graph, which shows that about 66% of athletes who meditated were calm, whereas only about 27% of those who did not meditate were calm.

This does not necessarily mean that meditation causes calmness. It could be the other way around, where calm athletes are more inclined to meditate. However, it does suggest that there is an association between meditating and calmness.
