Section B Summary

We used what we learned about factors, multiples, and prime and composite numbers between 1 and 100 to play games and solve problems.

We learned that numbers can share factors and multiples. Example:

- The number 2 is a factor of 6 and also a factor of 8.
- The number 24 is a multiple of 6 and also a multiple of 8.

Knowing about factors and multiples helped us answer questions such as:

- “Can we put 24 chairs in 6 equal rows? What about 7 equal rows or 8 equal rows?”
- “If there are 20 lockers in a row (numbered 1 to 20) and a student touches every fourth locker, how many lockers would they touch? Which locker numbers would they touch?”
