

Directions:

- Choose an object.
- Choose a unit to measure the length.  
(paper clips, small cubes, connecting cubes)
- Estimate how many units long your object is.
- Measure and record the actual measurement.

| object                 | unit                    | estimate                  | actual measurement        |
|------------------------|-------------------------|---------------------------|---------------------------|
| <i>example: crayon</i> | <i>connecting cubes</i> | <i>5 connecting cubes</i> | <i>4 connecting cubes</i> |
|                        |                         |                           |                           |
|                        |                         |                           |                           |
|                        |                         |                           |                           |
|                        |                         |                           |                           |
|                        |                         |                           |                           |
|                        |                         |                           |                           |
|                        |                         |                           |                           |
|                        |                         |                           |                           |
