Directions:

- Remove the cards that show 10 and set them aside.
- Spin the spinner to get your one-digit divisor for the round.
- Each partner:
  - Start with 6 cards, and choose 3 or 4 of them to create a dividend. Write a division expression and find the quotient and remainder.
  - Write a multiplication expression to represent the quotient and remainder.
  - Check your partner's work to make sure you agree.
  - Your score for the round is the remainder of your expression.

    Example: $109 \div 9$ is $(9 \times 12) + 1$. So, the score is 1.
- Take new cards so that you always have 6 cards at the beginning of a new round.
- The partner with fewer points after 6 rounds wins the game.
