

Directions:

- Remove the cards that show 10 and set them aside.
- Each partner:
 - Start with 7 cards. Choose at least 5 of them to create a division expression with a 2-digit divisor. Write a division expression and find the quotient and remainder.
 - Write a multiplication expression to represent the quotient and remainder.
 - Check your partner's work to make sure you agree.
 - Your score for the round is the remainder of your expression.
(Example: $1,119 \div 25$ is $(25 \times 44) + 19$. So, the score is 19.
- Take new cards so that you always have 7 cards at the beginning of a new round.
- The partner with fewer points after 6 rounds wins the game.
