

# Finding Perfect Squares

Let's explore perfect squares.

## 11.1 Finding Perfect Squares

Is each number or expression a perfect square? Explain to your partner how you know.

1.  $\frac{1}{16}$
2. 9
3. 39
4. 121
5. 324
6.  $x^2$
7.  $100t$
8.  $49a^2$
9.  $3c^2$
10.  $(x - 1)^2$

## 11.2 Solving Perfect Square Equations

Solve these equations. Be prepared to explain your reasoning.

1.  $x^2 = 16$
2.  $x^2 - 25 = 0$

$$3. x^2 + 13 = 113$$

$$4. 3x^2 = 75$$

$$5. 121 - x^2 = 0$$

$$6. 98 - 2x^2 = 0$$

$$7. (x - 2)^2 = 100$$

$$8. (x + 1)(x + 1) = 9$$

### 11.3 Row Game: Making Expressions Simpler

Work independently on your column to write each expression using the fewest number of terms possible.

Partner A

1.  $(4a)^2$
2.  $9b^2 + 39b^2 + b^2$
3.  $6c \cdot 6c$
4.  $4d \cdot 16d$
5.  $(\frac{1}{4}k)^2$
6.  $(\frac{1}{2}n)(\frac{1}{18}n)$
7.  $(x + 3)^2$
8.  $(4y - 1)(4y - 1)$

Partner B

1.  $5a^2 + 11a^2$
2.  $(7b)^2$
3.  $4c \cdot 9c$
4.  $8d \cdot 8d$
5.  $k^2 - \frac{15}{16}k^2$
6.  $(\frac{1}{6}n)^2$
7.  $(x + 3)(x + 3)$
8.  $(4y - 1)^2$
