

Attributes of Other Quadrilaterals

Let's describe and draw shapes in specific groups.

Warm-up

Number Talk: Divide by 7

Find the value of each expression mentally.

- $70 \div 7$

- $77 \div 7$

- $63 \div 7$

- $56 \div 7$

Activity 1

All the Ways

Select **all** the ways you could describe each shape. Be prepared to explain your reasoning.

1

1. triangle
2. quadrilateral
3. square
4. rhombus
5. rectangle

2

- A. triangle
- B. quadrilateral
- C. hexagon
- D. rhombus
- E. rectangle
- F. square

3

- A. triangle
- B. quadrilateral
- C. pentagon
- D. rhombus
- E. rectangle
- F. square

4

- A. triangle
- B. quadrilateral
- C. hexagon
- D. rhombus
- E. rectangle
- F. square

5

- A. hexagon
- B. quadrilateral
- C. triangle
- D. square
- E. rectangle
- F. rhombus

6

- A. hexagon
- B. quadrilateral
- C. triangle
- D. rhombus
- E. rectangle
- F. square

Activity 2

Draw One That's Not . . .

1. Draw a quadrilateral that's not a square.

2. Draw a quadrilateral that's not a rhombus.

3. Draw a quadrilateral that's not a rectangle.

4. Draw as many quadrilaterals as you can that aren't rhombuses, rectangles, or squares.

Section A Summary

We learned to sort shapes based on attributes, such as the number of sides, side lengths, and the number of right angles. A **right angle in a shape** is the angle made by 2 sides that meet like they do in a rectangle. We also sorted **quadrilaterals** and **triangles** into more specific groups.

We learned that a shape can be named based on its attributes. For example:

- If a quadrilateral has 4 right angles, then it is a **rectangle**.

- If a quadrilateral has 4 equal sides, then it is a **rhombus**.

- If a quadrilateral has 4 equal sides and 4 right angles, then it is a **square**.
